Software

Software is any set of machine-readable instructions that directs a computer's processor to perform specific operation - via Wikipedia

An aerial photograph of a silicon wafer, showing a complex grid of circuitry. The wafer is divided into several large rectangular sections, each with a different color: red, green, blue, and purple. The grid lines are thin and dark, creating a dense pattern of small squares. The overall appearance is that of a highly detailed and intricate microchip.

Software Engineering

Software engineering is the study and an application of engineering to the design, development, and maintenance of software - via Wikipedia

Software Engineering (cont.)

Solve problems in the real world through a medium - software. End user is human or machine.

software

Software in Various Disciplines

Free SMS!

Technologies : Java, Objective-C, etc.

Software in Various Disciplines (cont.)

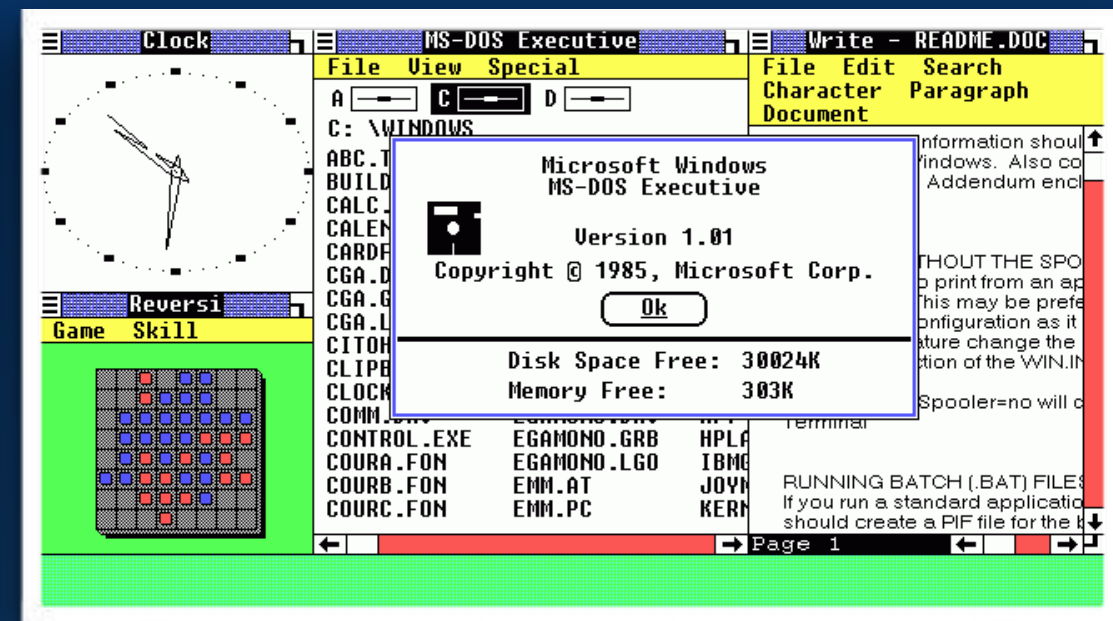

NASA Voyager : Explore more than solar system.

Software in Various Disciplines (cont.)

SoftBank Pepper : More freedom to aged people.

Software in Various Disciplines (cont.)

Microsoft Windows : An graphical operating system

Technologies : C, C++, C#, Assembly, etc.

Required Techniques

- Sense of discover real, critical problems
- An ability to implement a solution
- Managing group of people toward to achieve the goal

Programming Language

Programming language is a formal constructed language designed to communicate instructions to a machine - via Wikipedia

Flow of Execution

Exercise #1

Programming on Node.js REPL (Read-Eval-Print-Loop)

Abstraction

Technique for managing complexity of computer systems - via Wikipedia

Abstraction (cont.)

The essence of abstractions is preserving information that is relevant in a given context, and forgetting information that is irrelevant in that context.

- John V. Guttag, MIT

Assembly

Programmer need to handle atomic CPU instructions.

Lot's of boilerplate with control flow, set, get and others compare to high level languages like C.

Pablo Picasso - 'Bull - plate 2'
(December 12, 1945)

```
#include <stdio.h>
```

```
int main () {  
    printf("Hello World");  
}
```

C

Need to handle memory addresses and their usages.

Significantly abstractor then assembly.

Still boilerplates are existing compare to more high level languages - like python.

**Pablo Picasso - 'Bull - plate 5'
(December 24, 1945)**

```
print "Hello World"
```

Python

Programmer doesn't need to handle raw memory addresses even 'free' them.

They don't have to use basic boilerplate code.

Some of boilerplates are still existing for using framework.

**Pablo Picasso - 'Bull - plate 8'
(January 1, 1946)**

Future?

Transformation of General Purpose Languages to Domain Specific Language.

Computer's Prediction of programmer's mind.

**Pablo Picasso - 'Bull - plate 11'
(January 17, 1946)**

Future?

Programming Language
Corresponding to Natural
Language.

Who Know?
(Lots of Possibilities)

착한 사람 눈에만 보여요.

Hiun Kim - 'Bull - plate 14'
(July 7, 2015)

*Design
Domain Specific*

Value of Abstraction

Wasting programmer time is the true inefficiency, not wasting machine time. This will become ever more clear as computers get faster.

...

There's good waste, and bad waste. I'm interested in good waste—the kind where, by spending more, we can get simpler designs.

– Paul Graham, Y Combinator

Industry Usages

< C >

Embedded System, OS Kernel, Safety-critical system (ex. railway, automotive), etc.

< C++ >

Windows App, Game, Server (in financial companies), Audio / Image Processing, Device Driver, System Software (ex. Database), etc.

< Java >

Web Application Server, Desktop App, Large Data Processing, Android App, etc.

< Python >

Web Application Server, A.I related stuff, Software Testing / Deployment, etc.

< JavaScript >

Web Frontend, Web Application Server, etc.

(Internet Company Only, Technology stack at the beginnig of.)

Industry Usages (cont.)

~ 1995 Amazon (C++) PayPal (C++) Viaweb (Lisp) eBay (C++)

C++

1996 ~ 2000 Google (Java, Python) Naver (Java)

Java

2001 ~ 2005 Youtube (Python) Facebook (PHP) Flickr (PHP) LinkedIn (Java)

PHP

2006 ~ 2010 Twitter (Ruby [ROR]) Disqus (Python [Django]) Dropbox (Python) Tumblr (PHP)

Python, Ruby

2011 ~ 2015 Kakao Talk (Ruby [ROR]) Instagram, Pinterest (Python [Django])

JavaScript?

One Perspective

Every moment in business happens only once. The next Bill Gates will not build an operating system. The next Larry Page or Sergey Brin won't make a search engine. And the next Mark Zuckerberg won't create a social network. If you are copying these guys, you aren't learning from them.

- Peter Thiel, Palantir Technologies

Filling Gap Between Real World

But, how can create practical software in this weel?

Filling Gap Between Real World (cont.)

< Native Modules >

Enables us to use file system, send network packet, get memory information, etc.

https://en.wikipedia.org/wiki/Ethernet#/media/File:Ethernet_Connection.jpg

http://partition.radified.com/JPEGs/hard_disk_drive.jpg

Filling Gap Between Real World (cont.)

< System Softwares >

Database allowed us to store data in structured way. Cache helps us to serve more content faster. Web Server make possible to controll inbound traffics, etc.

mongoDB

redis

NGINX

ØMQ

MySQL

Spark

riak

Filling Gap Between Real World (cont.)

< Frameworks >

Driving us to more productive. Helps to follow best practices. More importantly make us to focusing on things that truly matter.

express

Tornado

django

CodeIgniter®

Flask

web development,
one drop at a time

Filling Gap Between Real World (cont.)

< Libraries >

Helps us to prevent to inventing a new wheel.

Nodemailer

SQLAlchemy

KoNLPy

JADE

UNDERSCORE.JS

NumPy
