HIUN KIM

Computer Science Department, Sejong University
Seoul, South Korea

An aerial night view of the Seoul skyline, South Korea. The city is densely packed with illuminated skyscrapers and residential buildings. In the background, Namsan Mountain is visible, topped with the N Seoul Tower, which is brightly lit and stands out against the dark sky. The overall scene is a vibrant display of urban architecture and lighting.

Idea

"1876년 알렉산더 벨은 자신이 만든 전화 특허를 전보 회사에게 팔려고 하였지만 거절 당하였다. 당시 전화기는 정말로 누구에게라도 쓸모 없는 장난감으로 보였을것이다. 가격도 비싸고, 음질도 안좋아 알아듣기 어려우며, 확성기같은 기계를 입에 대고 말하는것이 어색하고 품위 없게 보였을것이다.

하지만 그 장난감같은 전화기를 만들어내기 위해 수년의 시간을 바쳤던 벨은 전혀 다른 상상을 하고 있었을 것이다. 그는, 미국의 모든 집의 마루 한 중심에 자신이 만든 전화기가 놓여 있는 장면을 상상했을 지도 모른다. 어쩌면, 불가피한 이유로 떨어져 살게 된 가족들이 서로의 안부를 묻고 목소리를 들으며 눈물을 흘리는 장면을 상상했을 지도 모르겠다."

Essentiality Matter!

What is our essentiality?

What is R?

What is the things we provides?

Which problem we trying to solve?

R is,

Community where you can find and share essential things through locations.

We want to,

Review

Feeling

News

Provides **Things** that Matter

Thinking

Information

Meetup

To solve,

Difficulties around find and share
essential information

Use case (1)

hyungjune is attending conference

Use case (2)

gitaek is attending university

Implementation

Redis

txt2html

MongoDB

ECMAScript 2015

Nginx

Node.js

Webpack

Python Fabric

Git

Web Application Server (WAS)

Design Goals

Design in software is architecture -
not just internal of it, but external as well.

What is good architecture?

Good architecture is done by,

The essence of **abstractions** is preserving information that is relevant in a given context, and forgetting information that is irrelevant in that context. *by John Guttag*

MongoDB

Redis

Nginx

AWS

user.js

models.js

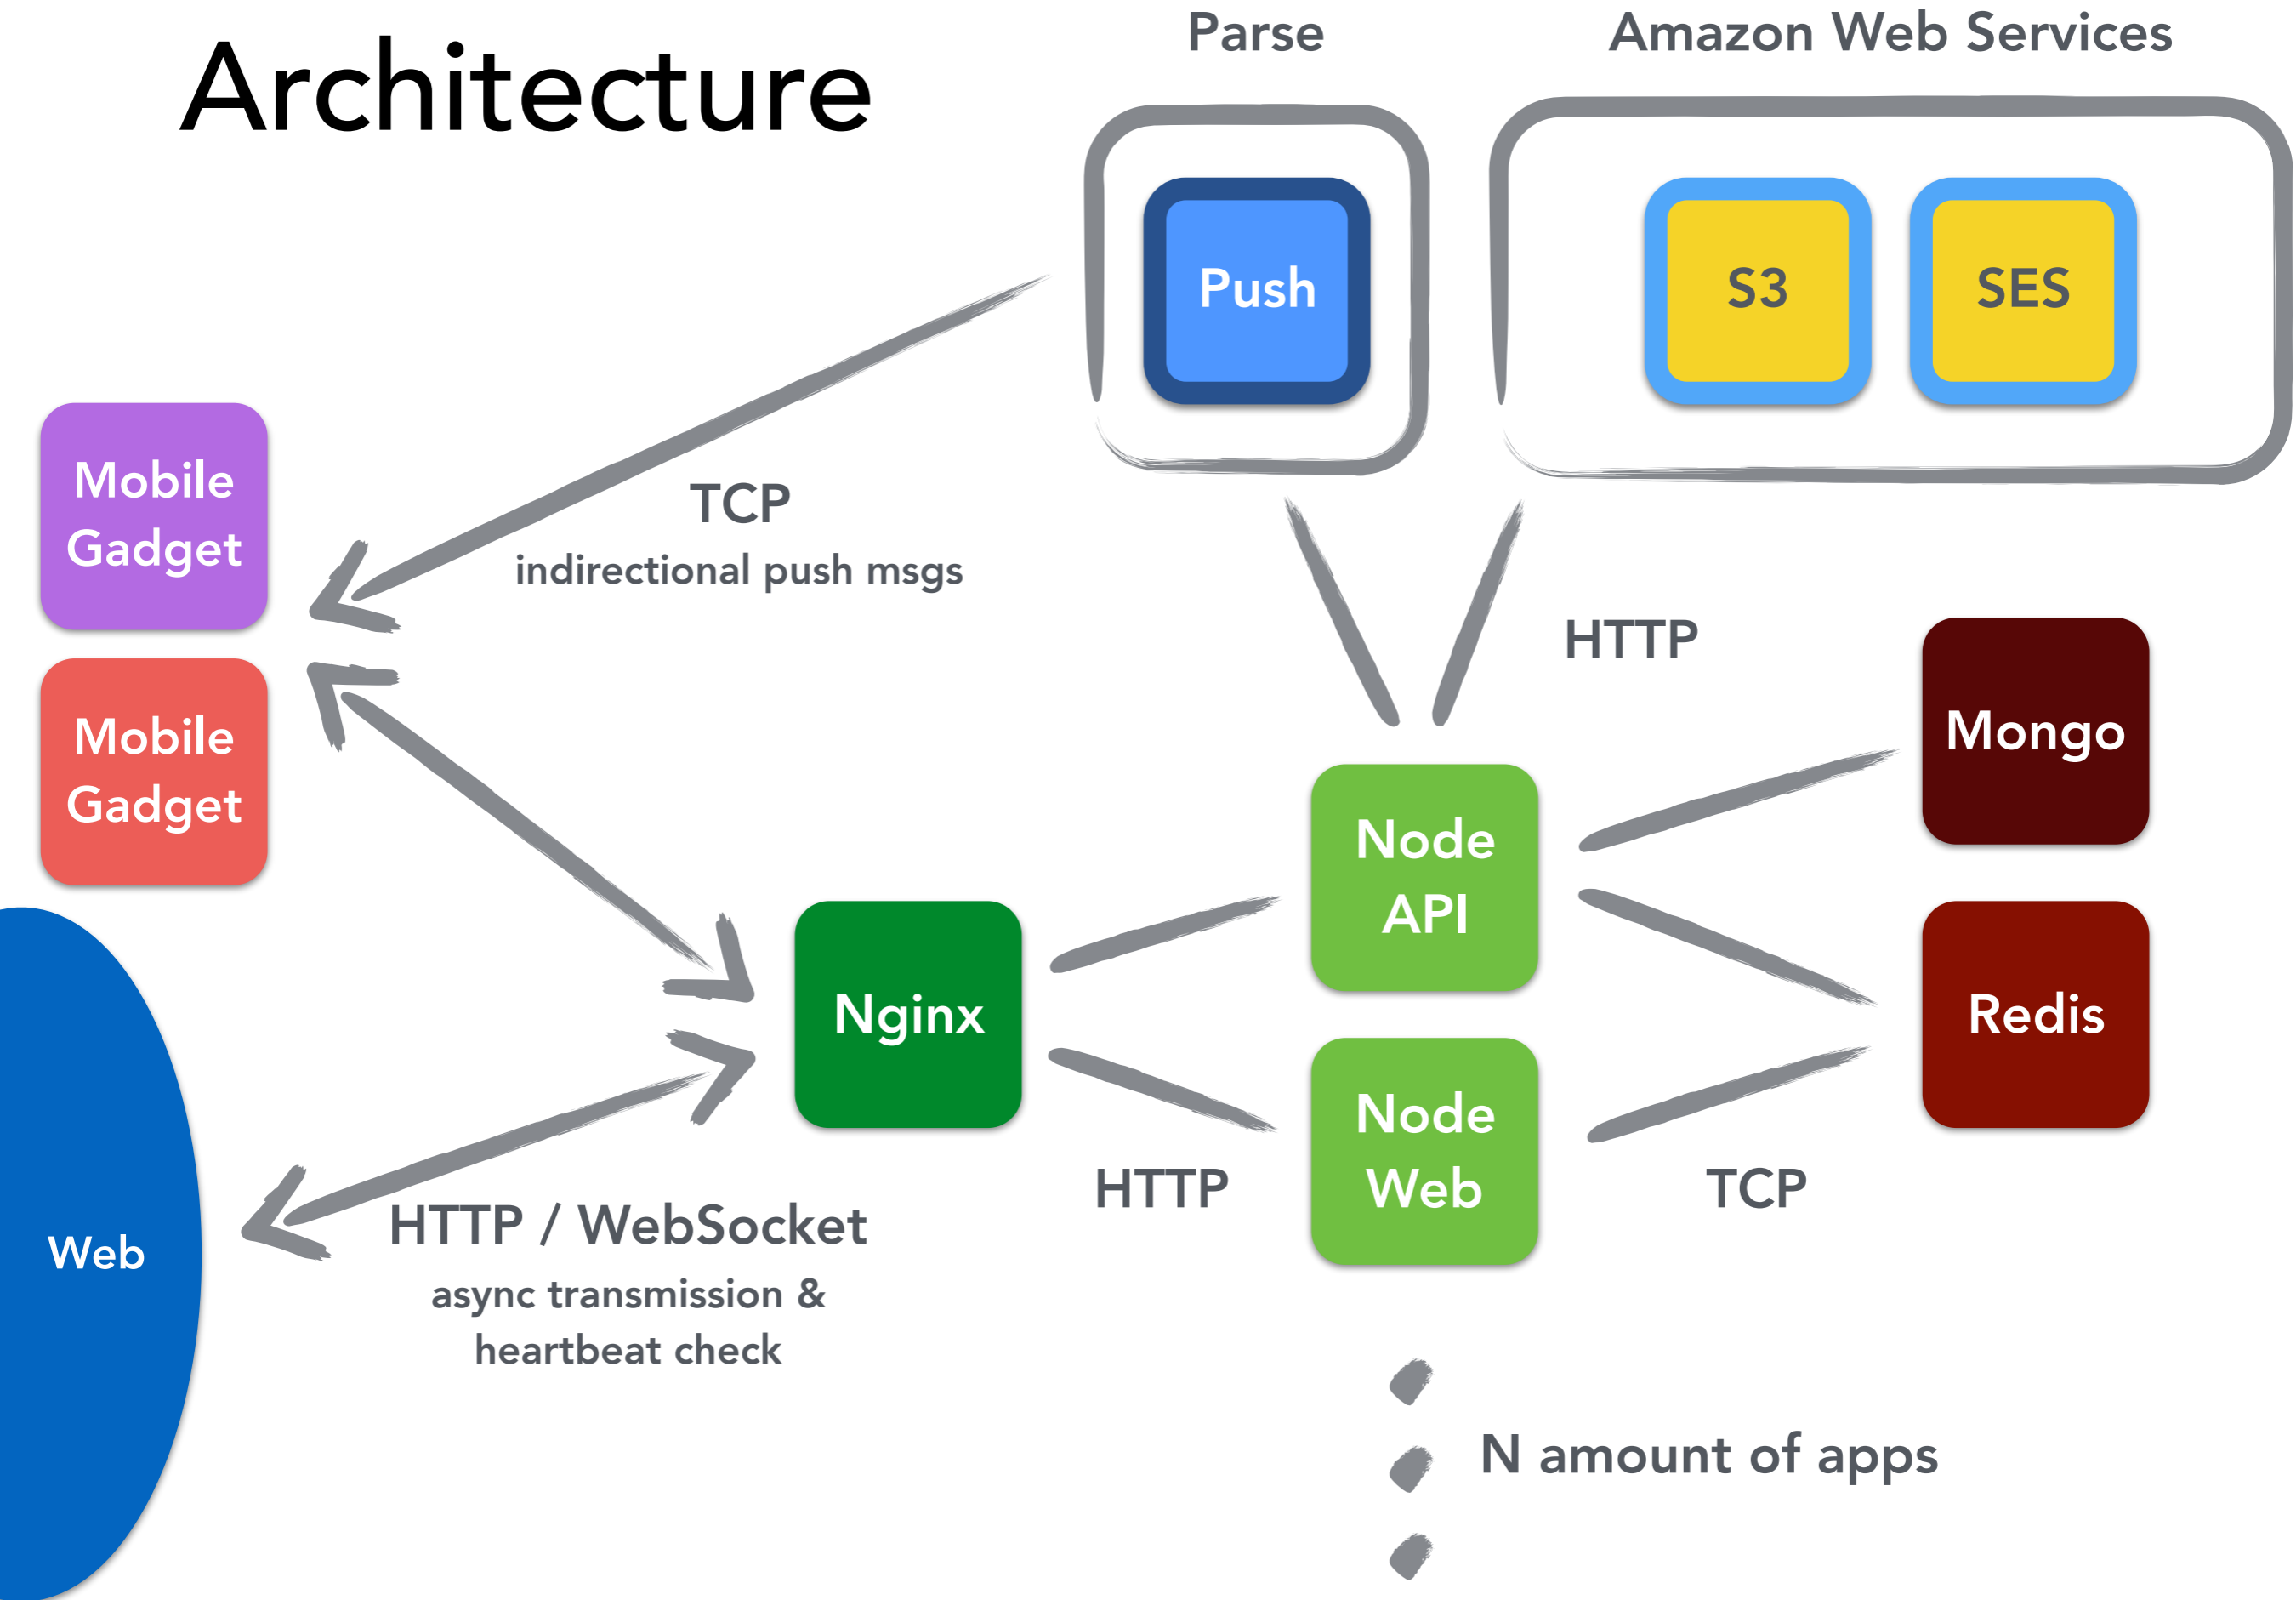

post.js

Inside the Application

New York City, New York, circa 1959

Architecture

Centralized Configuration

Multilingual Support?

Modularity

Ajax Decorator

HTTP Decorator

Loose Coupling

Right Abstraction

Promise Pattern

Lazy Definition

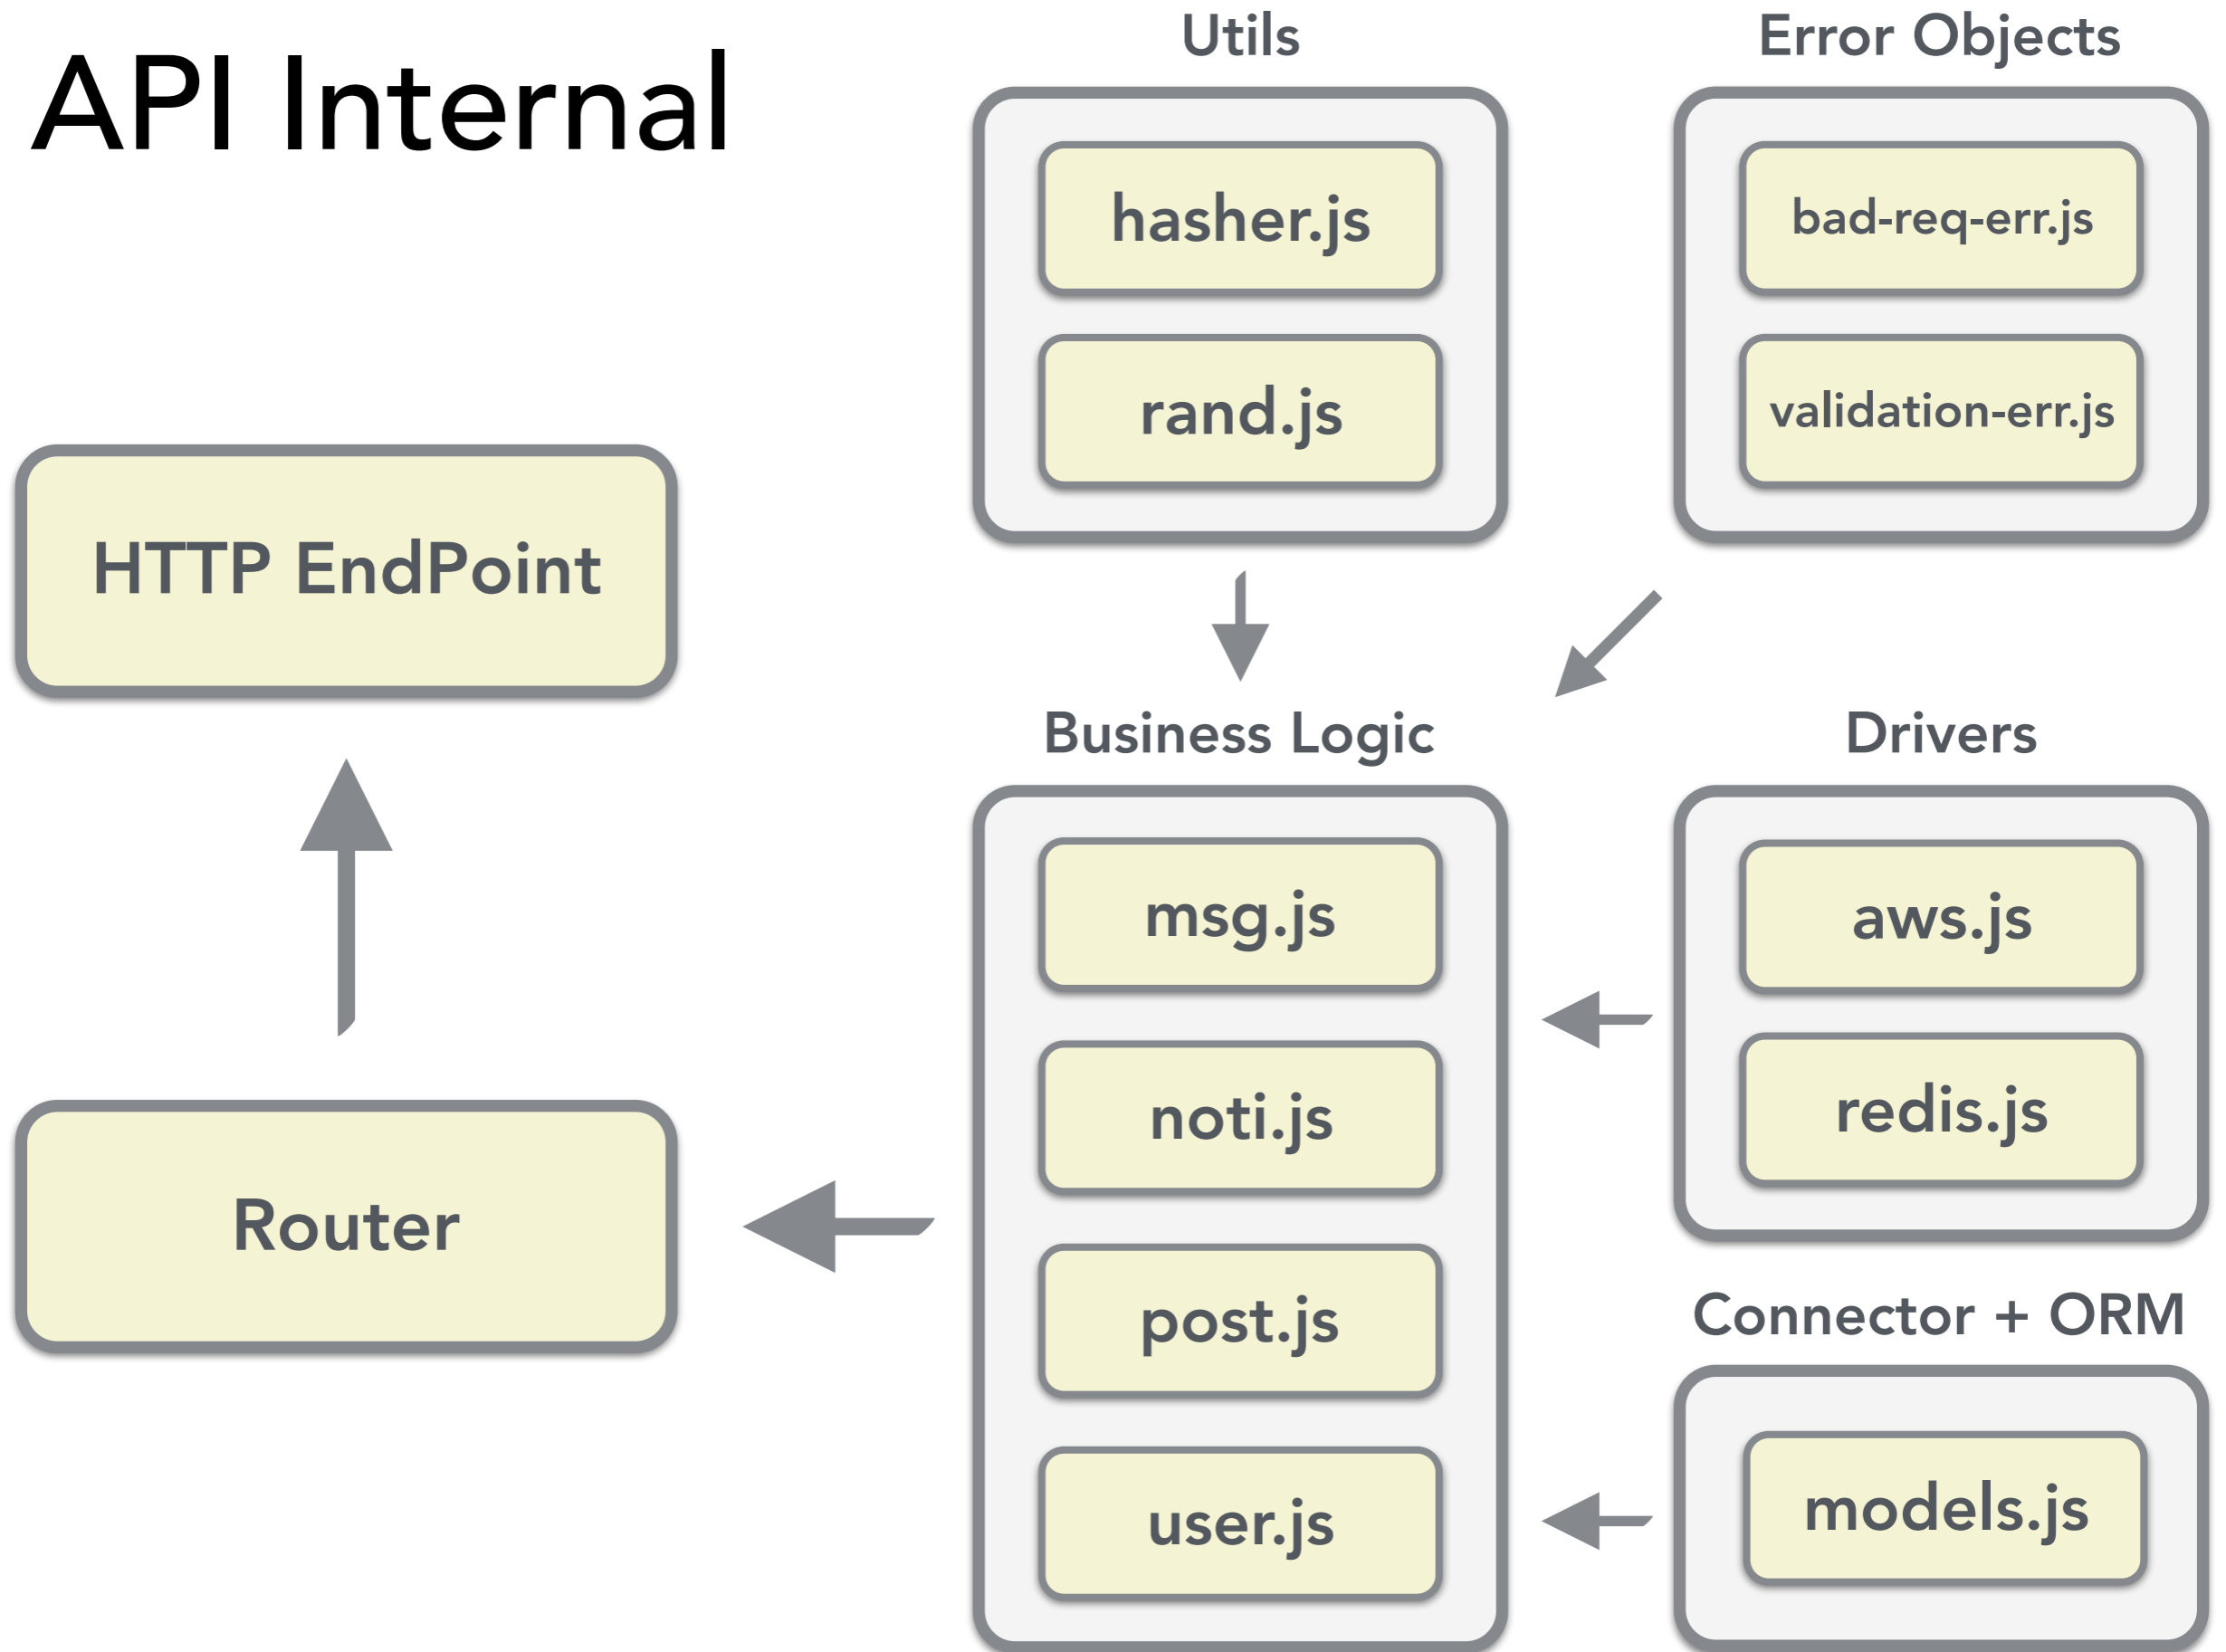

Load Balancing

Event communication

Location-based Search

Single Page Application

API Internal

Web Internal

DOM Event

Event Handler

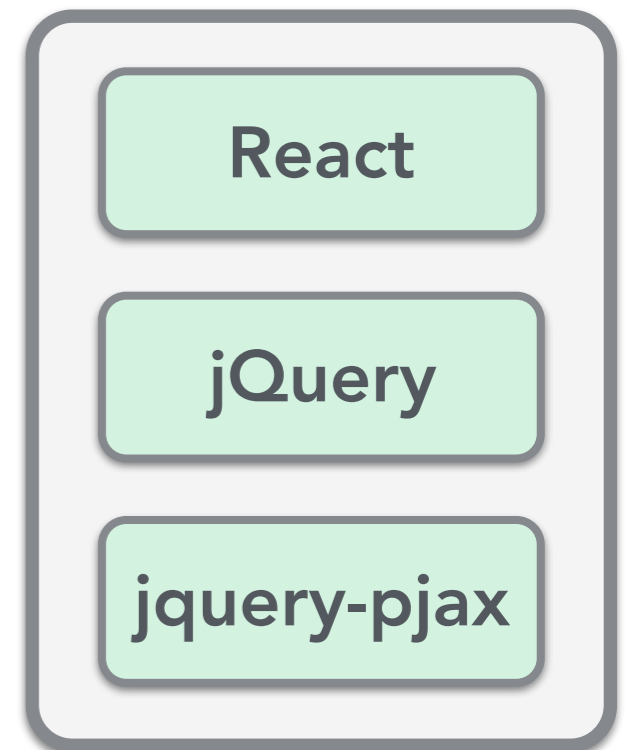

Components

Utils

Libraries

Decorator Pattern

Attach additional responsibilities to an object dynamically keeping the same interface.

Decorators provide a flexible alternative to subclassing for extending functionality.

A.K.A Wrapper Pattern

HTTP Decorator

*Reduced boilerplate from every entry points of module
Make consistency to decorate data in common forms*

2. Trim raw HTTP to QueryString, Body, Session, File, Lang and Etc.

1. Wrapping business logic into decorator function

Ajax Decorator

DOM Event

*Reduced boilerplate that polluting business logic
Single entry point got higher maintainability*

Event Handler

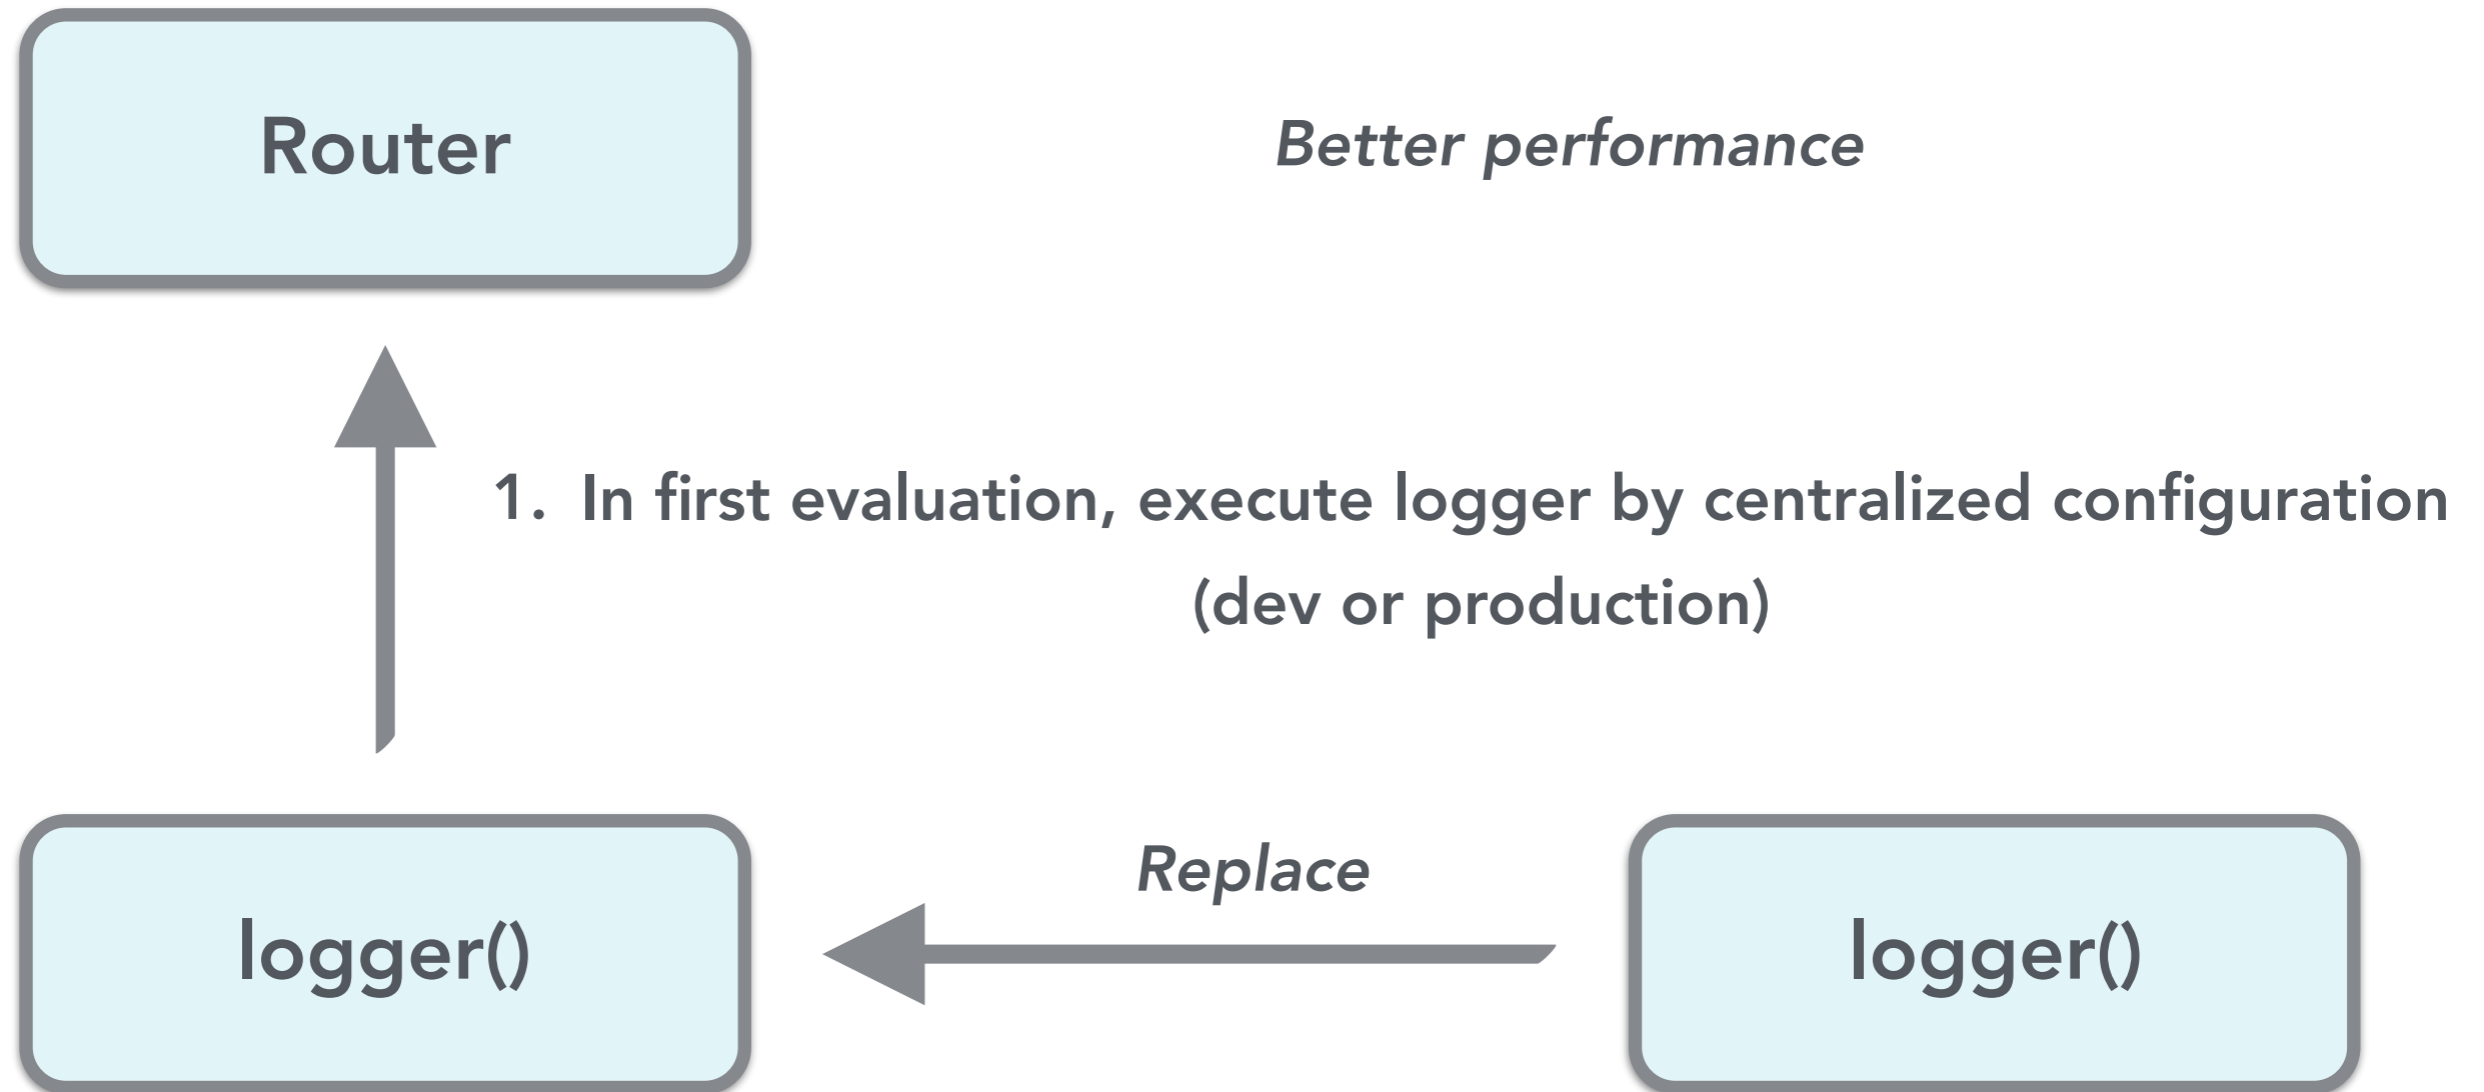

- 1. Manipulate indication user-interfaces
- 2. Attaching common error handling function

app.ajax()

jQuery.ajax()

Lazy Definition

2. Child logger function is placed in parent logger function, child replace parent logger function and will used for next evaluation.

Multilingual Support

HTTP EndPoint

*Reduced boilerplate that polluting business logic
Single entry point got higher maintainability*

1.Decorator invoke negotiator with passing HTTP header

Decorator

2.Negotiator retrieve appropriate lang by supported langs
3.Rendering template by selected locale in localeSelector

Negotiator

localeSelector()

Searching contents

Location-based content search +
pagination in stateless environment

Searching contents (cont.)

Difficulties to calculate circular inclusion in DB

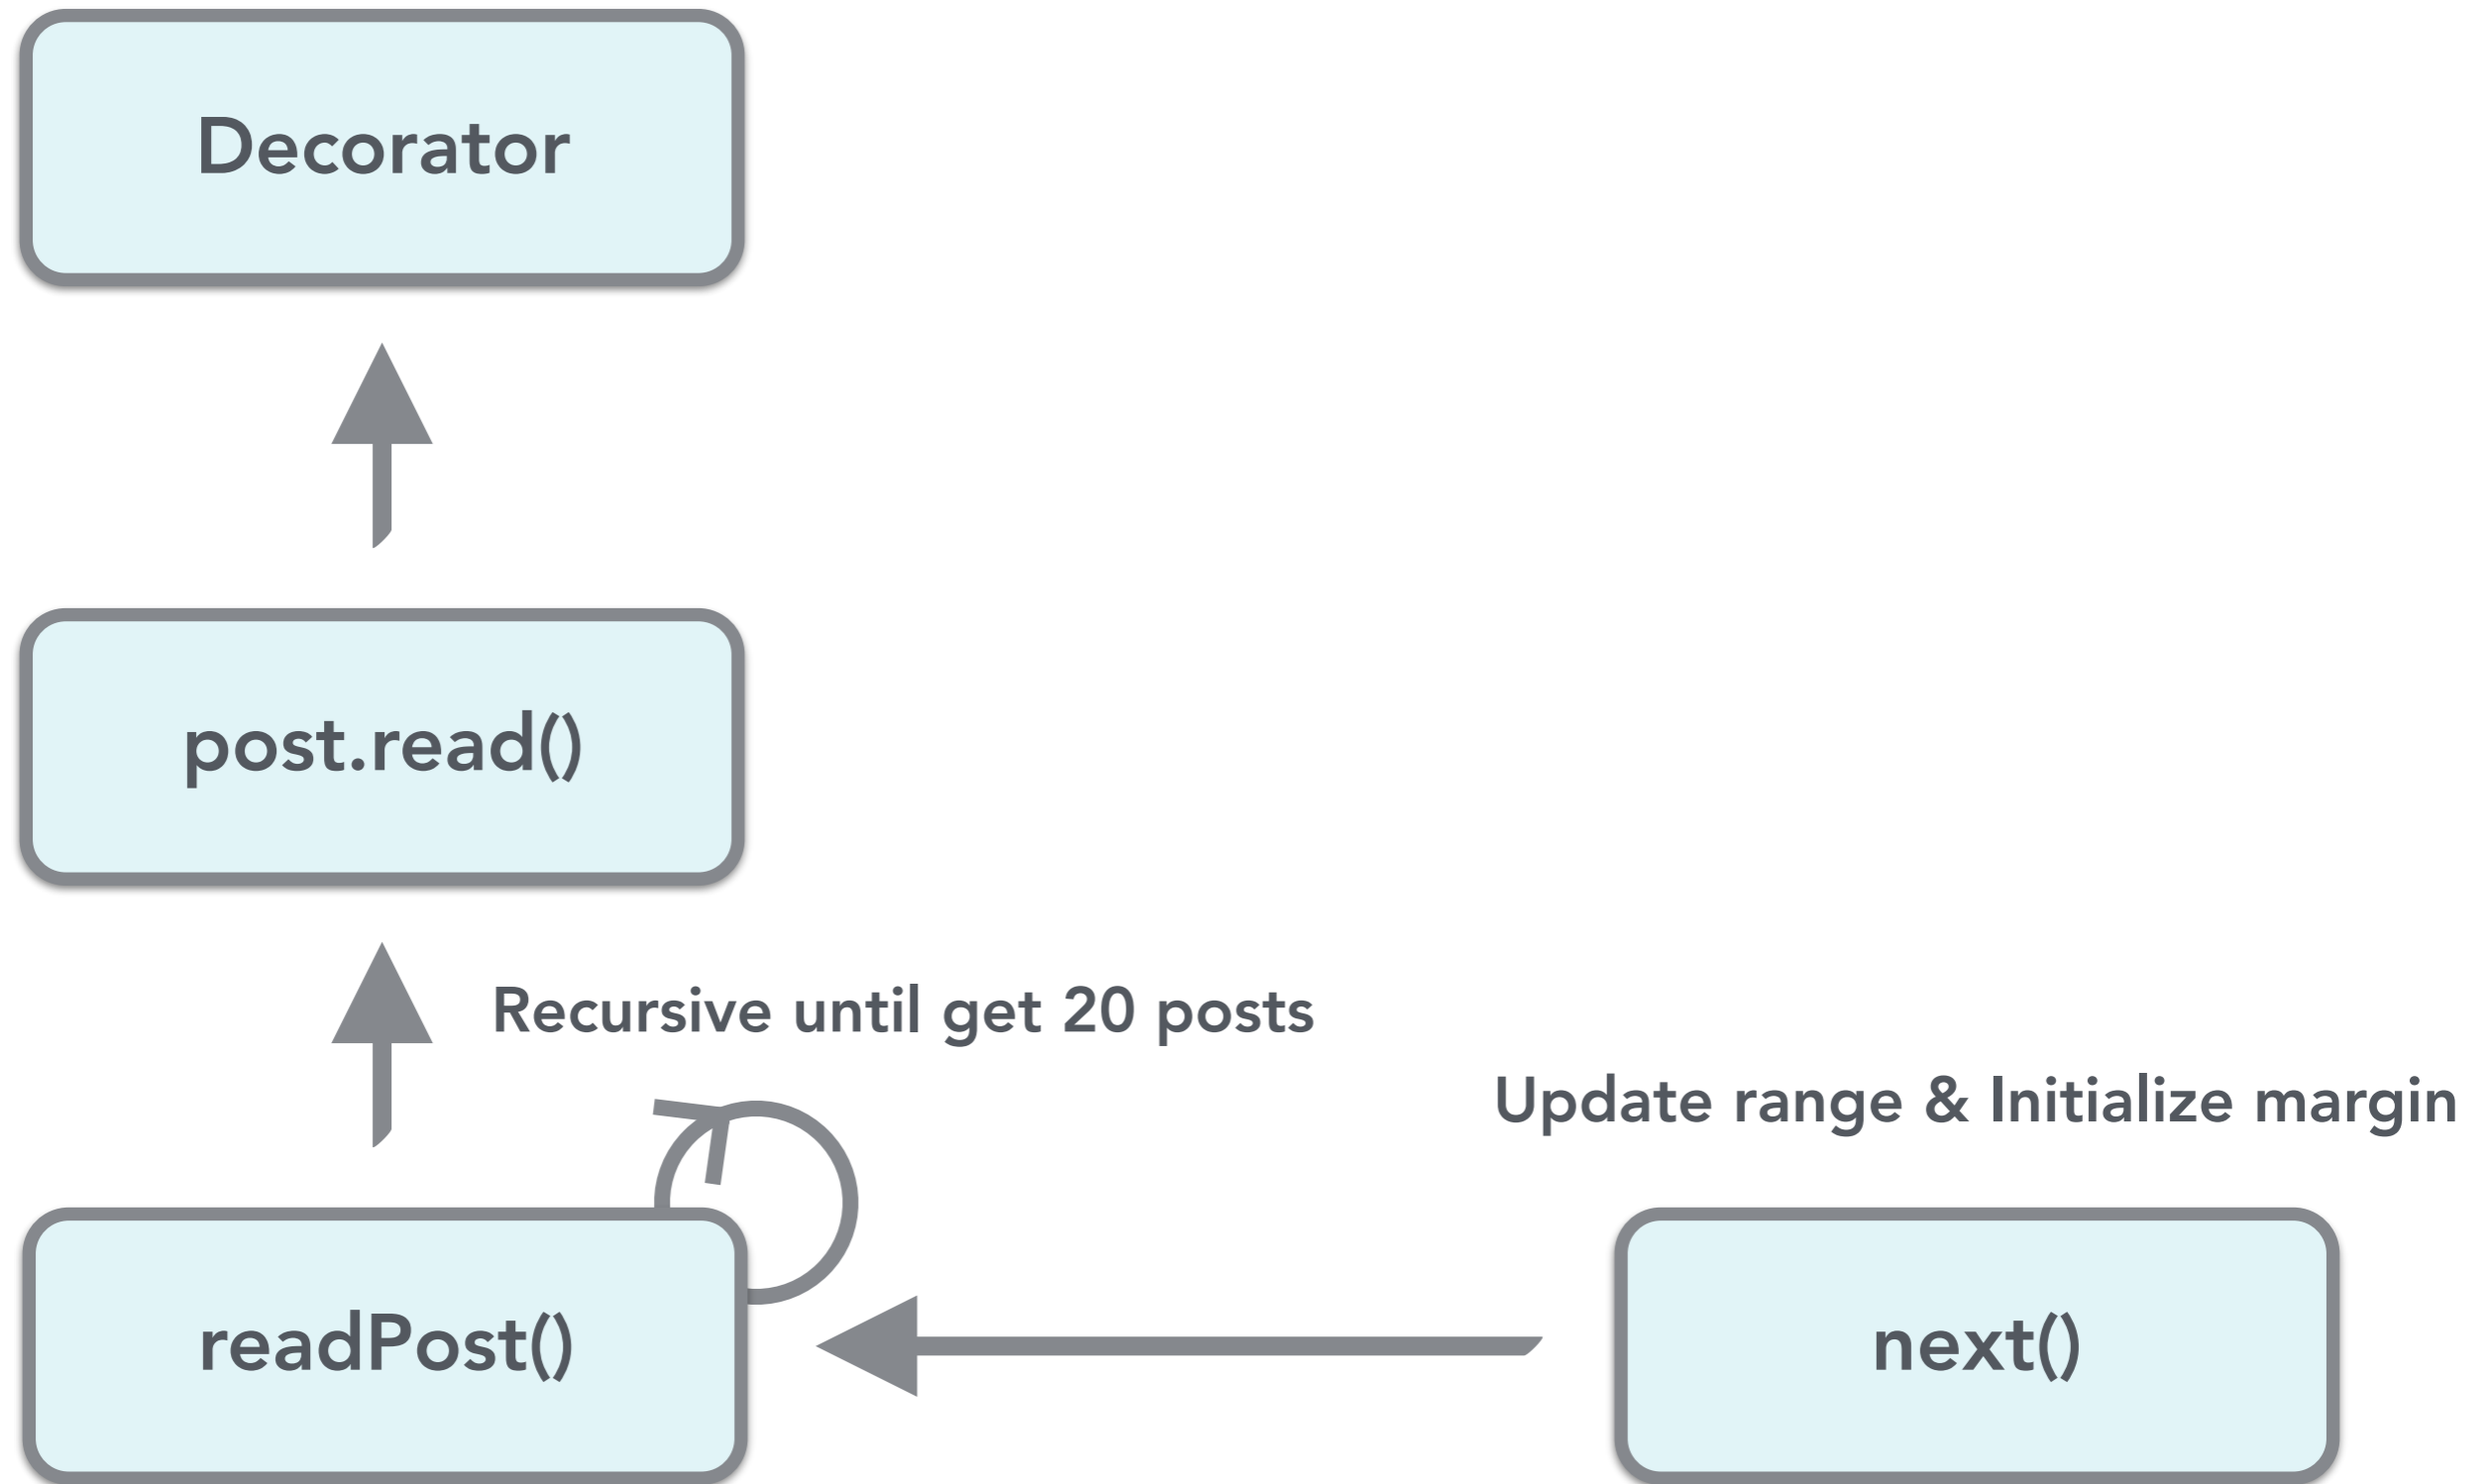

MongoDB provides 2dsphere index with \$near aggregator able to search closest element in specified range or all

Searching contents (cont.)

By location coordinate in stateless env.

- > Based in client-side continuity
- > Tradeoff between accuracy and performance
- > Prune duplicate in client side

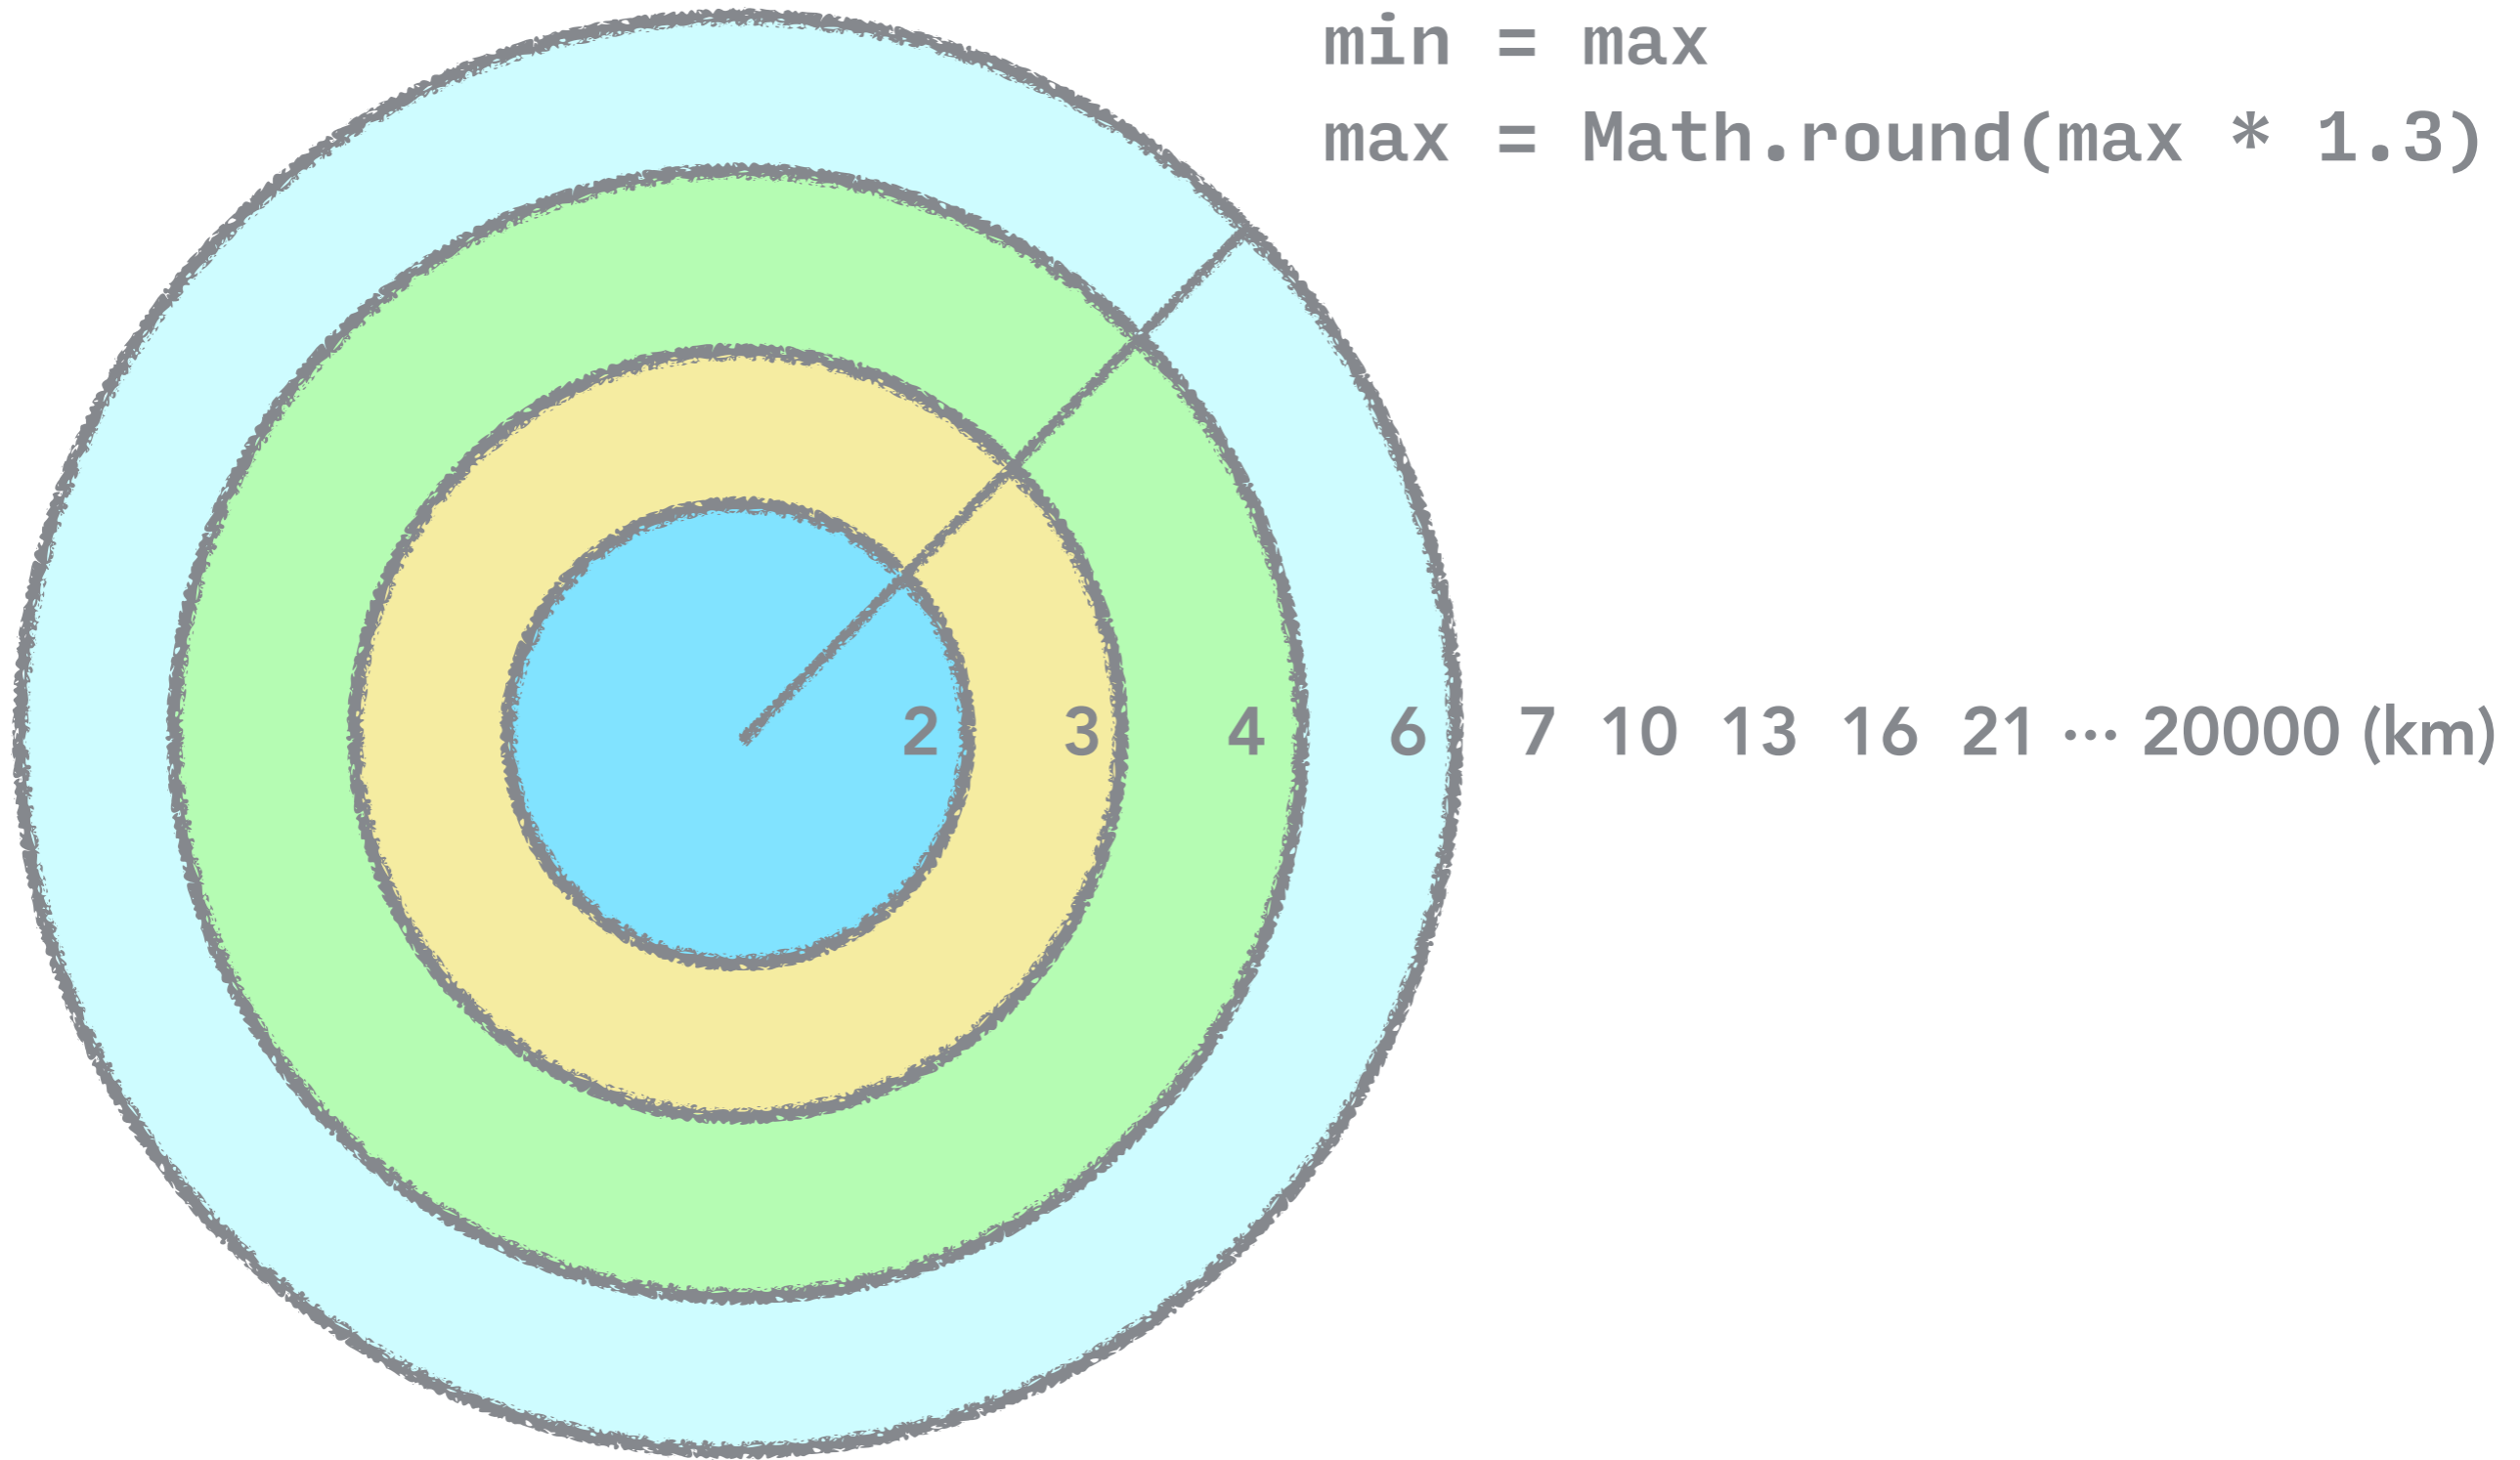

Searching contents (cont.)

Searching contents (cont.)

`min = max`

`max = Math.round(max * 1.3)`

Searching contents (cont.)

Loading unit per time : 20

posts in range respectively.

Searching contents (cont.)

Query to get content in specific range with Mongoose

```
DB.Posts.find({
  loc: {
    $near: {
      $geometry: {
        type: 'Point',
        coordinates: loc
      },
      $maxDistance: (Math.round(maxDistance) * 1000),
      $minDistance: (Math.round(minDistance) * 1000)
    }
  }
}).limit(20).skip(margin).exec();
```

Go Real-time

User think current state is latest state

For maximum usability, realtime notification and messaging is required

Go Real-time (cont.)

HTTP has request - response structure

WebSocket for chatting and notification

XMPP for mobile push notification

When user opens web page,

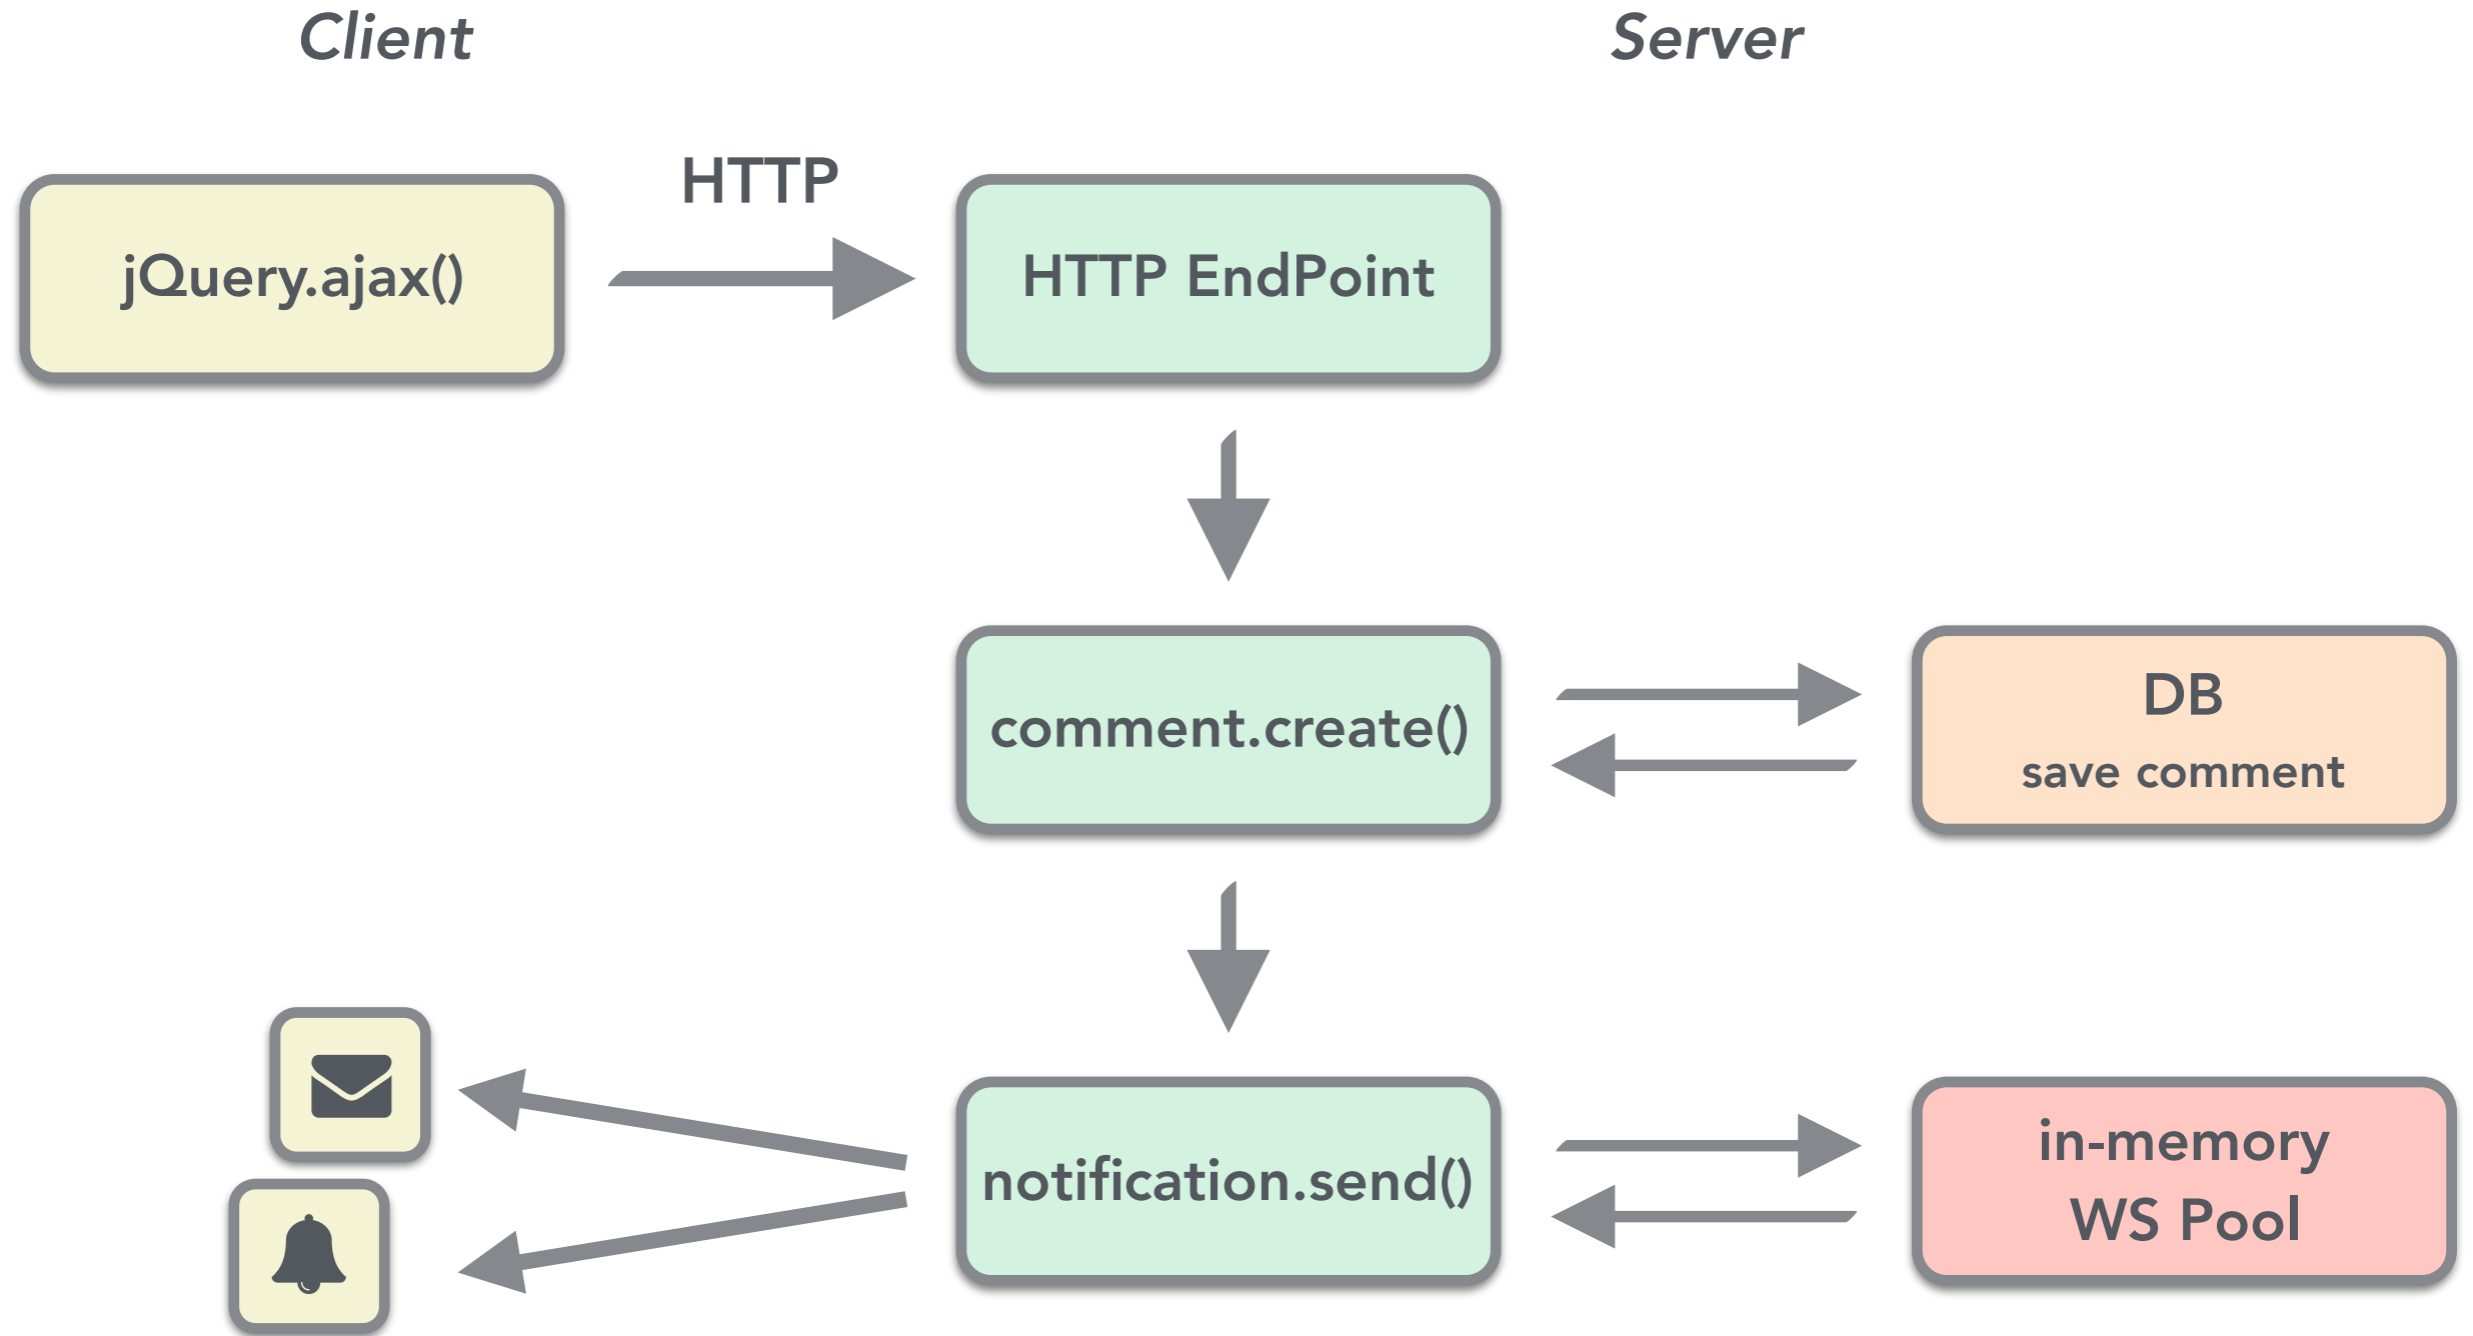

Client

Server

async, bidirectional communication

When user creates comment,

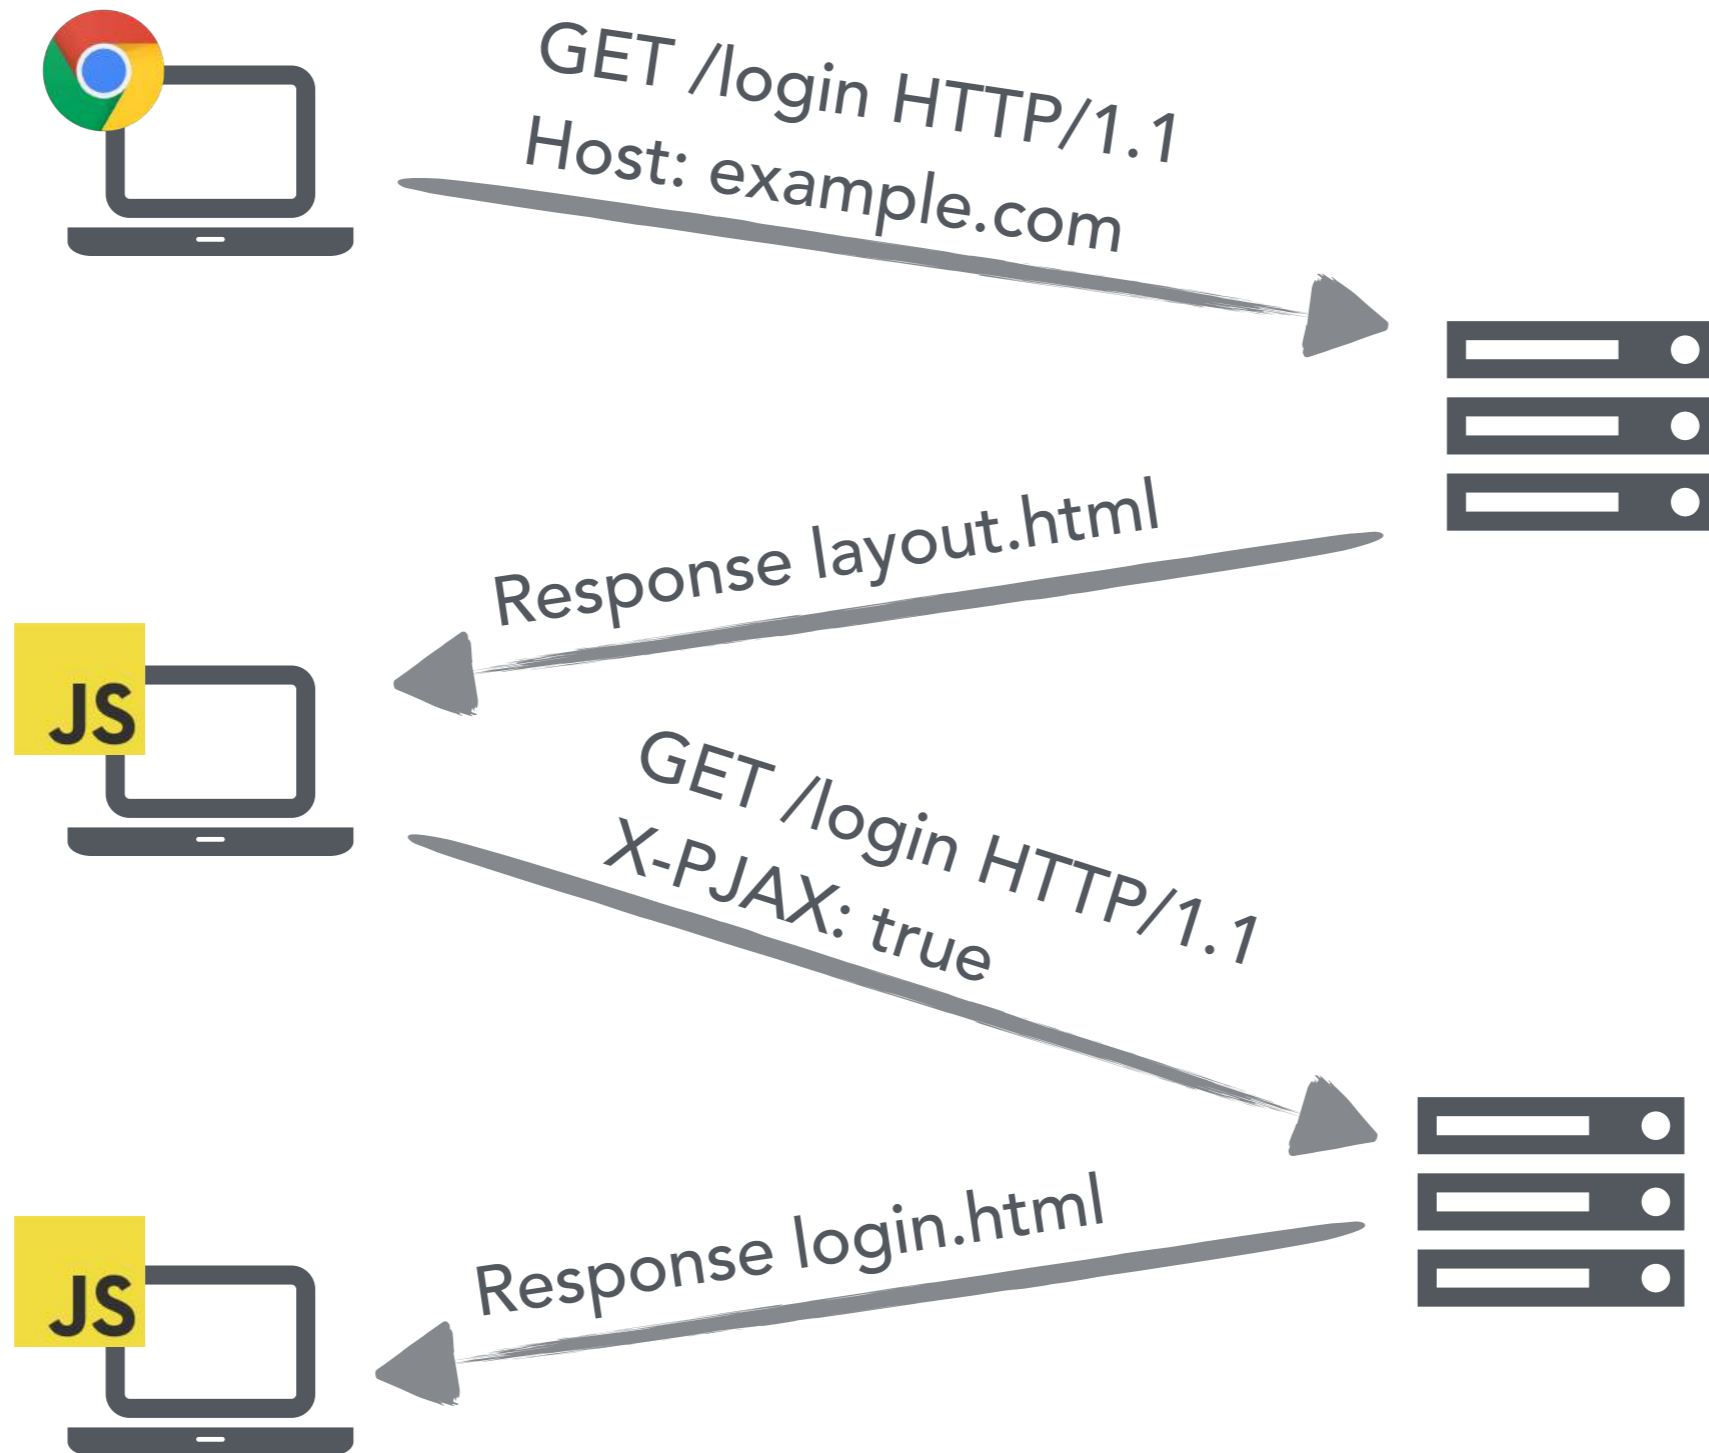

Push Real-time Notifications & Messages

Single Page Application

Seamless user experience through,
partial page loading and
dynamic content appending
reduced roundtrip to server

Single Page Application (cont.)

Single Page Application (cont.)
